1. Basic Information of District:

District Name: Chikkaballapur

Division: Bangalore

District Establishment Year: 23 August 2007

Headquarter: Chikkaballapur

Current CEO: Dr. Naveen Bhat Y. IAS.

Current CPO (In charge): Raghu G.P

2. Background of District NRDMS Centre, Chikkaballapur

Chikkaballapur district was established on August 23, 2007, from the Kolar district of Karnataka. Located in the southern part of the state, the district headquarters is the town of Chikkaballapur. NRDMS Chikkaballapur established in 2008-09. NRDMS centers established in each of the districts in Karnataka are providing geospatial data, information and services to support development planning since 1992. The NRDMS Centre providing analyzed/value added information to planners and administrators besides developing applications using geo-spatial technologies suitable for local level planning. Its providing need-based information to users such as elected bodies, district administration and planners through maps, charts, tables, and reports etc on spatial and non-spatial data. Maintenance & updation of database of Panchayath Raj Institutions, Legislative Assembly and Parliamentary Constituency since 2000. Support to delimitations of GPs. Organization of training programmes.

3. Geographical Features:

a) Location & Boundaries:

Chikkaballapur district is located in southeastern Karnataka, bordering Andhra Pradesh and known for its semi-arid, eastern dry climatic zone with hot summers and mild winters. The landscape features the Nandi Hills region with an average elevation of 915 meters, making it a high-altitude area with rolling hills and valleys. The town of Chikkaballapur is the district headquarters and a key transport link in the North Bangalore area. The north-south six-lane National Highway (NH44) as well as the East-West Highway 69 goes through the district. A rail line runs north from Bangalore to the town of Chikballapur, east past Doddaganjur to Srinivaspur and south to the town of Kolar.

Elevation & Terrain: The district lies on the **southern Deccan Plateau**, with hilly terrain. It spans latitudes roughly between **12°45'N to 13°57'N** and longitudes **77°24'E to 78°35'E**.

District Geographical area (in Sq.Kms)	4244 km2			

A. Topography:

Chikkaballapur's topography is characterized by its high elevation and location in the center of the Nandi Hills region, a "Panchagiri" area, meaning it's surrounded by five picturesque hills including Nandi Giri, Chandra Giri, Skandagiri, Brahma Giri, and Hema Giri. This hilly terrain is interspersed with plains and rocky areas, featuring a delicate, thin soil cover, and a generally low water table. The northern part of the district has a semi-dendritic to dendritic drainage pattern, with the North Pennar river rising near the Nandi Hills.

B. Climate:

Chikkaballapur has a generally pleasant, mild climate due to its high elevation in the Nandi Hills region, with distinct wet and dry seasons. The winter months (September to February) are considered the best for visiting, offering very pleasant temperatures and good conditions for outdoor activities. The hot and humid summer months (March to June) are less comfortable, though the evenings can be suitable.

D. Seasons & Temperatures

Summer (March to May):

Temperatures: Day temperatures can be very hot, reaching up to 40°C.

Conditions: It's generally considered hot and uncomfortable, making it less preferable for tourists.

Monsoon (June to October):

Temperatures: Temperatures range from 20°C to 30°C.

Conditions: The area receives irregular rainfall due to the southwest monsoon. While it brings refreshing greenery, it can limit outdoor activities, so some tourists avoid this period.

Winter (October to March):

Temperatures: The weather is pleasant, with temperatures ranging from 19°C to 32°C.

Conditions: This period is ideal for visiting Chikkaballapur due to the comfortable weather. The months from October to March are often recommended.

Rainfall & Weather Phenomena

Tropical Climate: Chikkaballapur's climate is classified as Aw, a tropical savanna climate.

Rainy summers: The summers are characterized by more rain, while the winters are considerably drier.

Average Rainfall: The district receives an average of 785 mm of rainfall annually.

Monsoon Influence: The period between June and August is particularly wet, with a higher chance of precipitation.

C. Natural Resource:

Soils: Chikkaballapur's soil is dominated by red soils and lateritic soils, with some areas also containing alluvial and sandy soil types. Red soils are characterized by low water and nutrient retention, while lateritic soils are highly weathered, poor in fertility, but have high clay content. Overall, the soil fertility in the district is often low in key nutrients like organic carbon, nitrogen, phosphorus, and potassium.

Water:

Chikkaballapur faces a severe and ongoing water crisis due to its lack of perennial water sources, relying almost entirely on overexploited groundwater. This has resulted in a declining water table and high levels of fluoride and nitrate contamination.

Crops:

The main crops in Chikkaballapur are ragi, groundnut, and a wide variety of horticulture crops, including vegetables, fruits, and flowers. Sericulture (silk farming) is also a significant agricultural activity in the district.

Climate Characteristics

Seasonal characteristics

Summer (March to June): The summers are hot, especially from March through May, which is the hottest period of the year.

Temperature: Average daily high temperatures can reach or exceed 91°F (33°C), with April being the hottest month, averaging 94°F (34°C).

Wet Season (May to November): This season is warm, humid, and overcast, with the highest rainfall occurring during the monsoon period.

Rainfall: The wet season typically lasts from May to November, with September being the wettest month. Average annual rainfall is about 785 mm.

Winter (October to February): The winter season brings mild temperatures.

Temperature: Average daily high temperatures are below 82°F (28°C) during the cool season from October to January. The coldest month is December, with an average low of 60°F (16°C).

Dry Season (November to May): This is the drier part of the year, with a lower chance of precipitation.

Temperature: The temperature in Chikkaballapur typically fluctuates between 59°F and 94°F (15°C and 34°C) over the year. It rarely drops below 53°F (12°C) or rises above 100°F (38°C).

Rainfall variability: The area experiences erratic rainfall, which, along with the semi-arid conditions, makes it prone to drought.

Relative humidity: The perceived humidity varies extremely throughout the year, with a "muggier" period lasting from April to December.

Wind: The windiest time of year is from late May to early September, with the calmest winds occurring in October.

Climate change impact: Recent analysis suggests a worsening of climate conditions, with Chikkaballapur having a "High" climate change severity score

D. Major Rivers/Water Resource:

- **Chitravati River:** Originates in the district, is a part of the Pennar river basin, and is seasonal, flowing only for a limited period.
- **South Pinakani River:** Originates from Nandi hills and flows through the district.
- **North Pennar River:** Drains a large part of Gauribidanur taluk and flows into Andhra Pradesh.
- **Tanks:** Historically, numerous tanks provided irrigation, but most are now silted, reducing their water storage capacity.

1. Major Activities Carried Out during the period of April-July 2025:

Uses of GIS for Ground Water Department, Zilla Panchayath

Objectives: As per the order of the meeting held under the chairmanship of the Honourable District Commissioner and the Chairman of the District Ground Water Authority Office, permission from the Ground Water Authority is mandatory for getting electricity connection to the tube wells dug by private persons for agricultural/drinking purposes without authorization. Therefore, it is mandatory for there to be a distance of 500 m between the private tube well and the government tube well. Therefore, the Honourable District Commissioner intends to get the GPS latitude and longitude of the NRDMS officers and map out the distance between them.

Statistics Requirement:

1. Need for latitude and longitude information.
2. Need for information on private and government bore wells.

Map Uses: Since the permission of the Ground Water Authority is mandatory for the District Ground Water Authority office to get electricity connection to the tube wells dug by private persons for agricultural/drinking purposes, it is mandatory to have a distance of 500 m between the private tube well and the government tube well. Applications were received along with GPS Points coordinates and based on the coordinates mentioned in the said applications, the application was checked and the distance between the private tube well and the government tube well as per the Act 1999 was verified and the Buffer zone mapping of 500 m from the NRDMS center was done and confirmed. Due to this, if there is a difference in the distance between the government and private tube wells, the map will help in rejecting the application.

- Map provided by Jpg and Pdf format.

Uses of GIS for Ground water Department

Zilla Panchayath

Objectives: There are a total of 52 observation bore wells within the jurisdiction of the Senior Geology and Groundwater Office of Chikkaballapur District. At the request of the senior geologist, a seasonal groundwater level fluctuation map was prepared by the District NRDMS Centre using GIS technology.

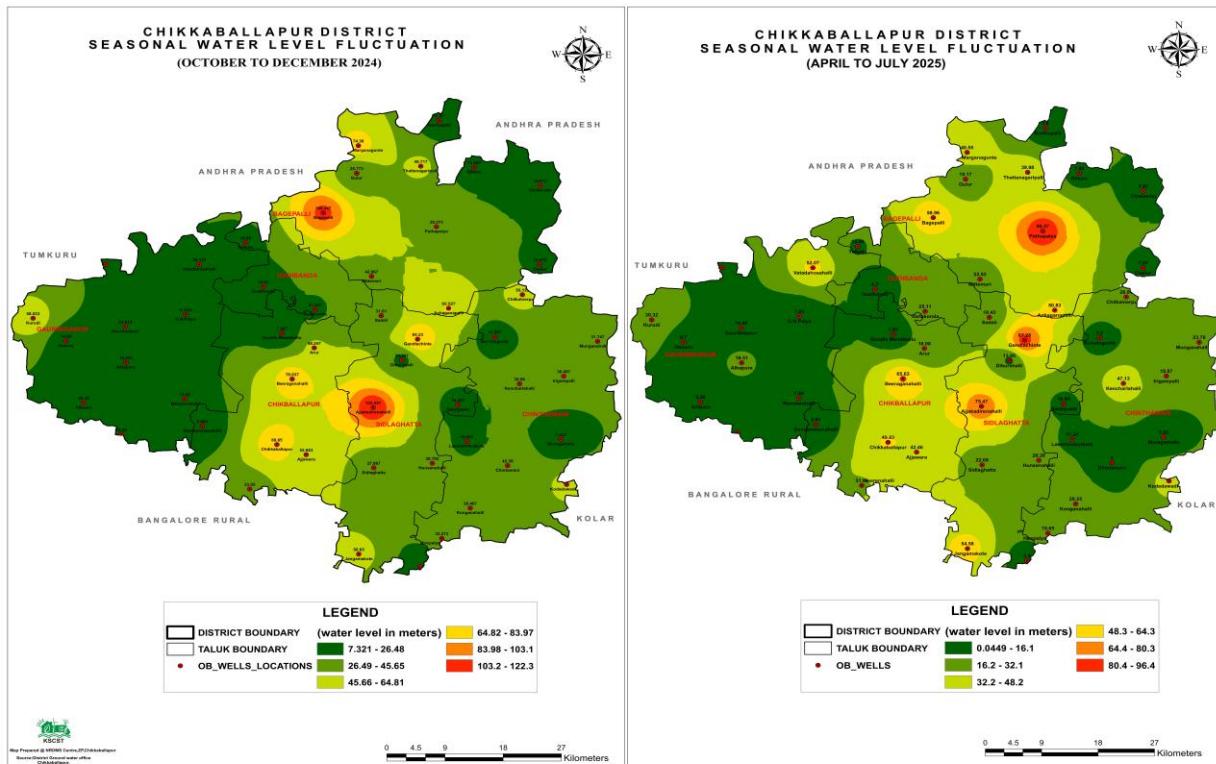

Statistics Requirement:

- 1) Need for GPS points of observation bore wells in the district.
- 2) Need for data on static water level from January to July 2025

Map Uses:

1. The GIS map will help to know the status of the fixed water level of bore wells for each month.
2. With the help of maps, it will help to study the seasonal level fluctuations seen in the district.
3. It will be useful to identify areas where the groundwater level is low and increase the groundwater level.

- Map provided by Jpg and Pdf format.

Uses of GIS for Rural water supply and Sanitation department Zilla Panchayath

Objectives:

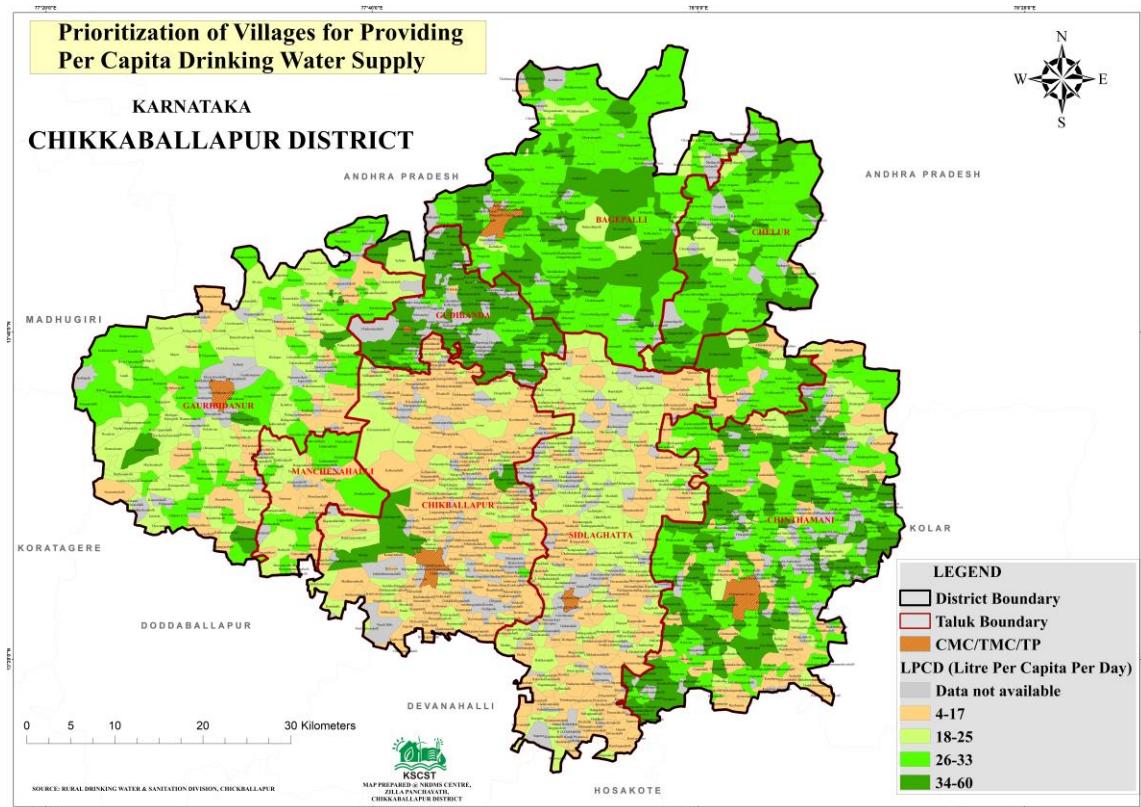

As per the order of the Hon'ble Chief Executive, Chikkaballapur, an order was issued to prepare a village-wise LPCD map of drinking water in Chikkaballapur district. Accordingly, the Gram Panchayat-wise LPCD data will be collected by the Rural Drinking Water and Sanitation Department, Chikkaballapur and the objective will be to prepare a Prioritization of Villages Providing per capita drinking water supply map.

Data Used: District Boundary, Taluk Boundary, LPCD data.

Map Uses:

As per the instructions of the Hon'ble Chief Executive Officer, Chikkaballapur, a map was prepared showing the locations where LPCD system has been provided. This will help the Rural Drinking Water and Sanitation Department, Chikkaballapur, to know where LPCD has been provided village-wise.

- Map provided by Jpg and Pdf format.

Uses of GIS for NREGA scheme, Zilla Panchayath

Objectives: Monthly and annual actual rainfall distribution data were collected by the Department of Agriculture and were indexed in a database using Arc GIS 10.3 software to Createand a rainfall report map.

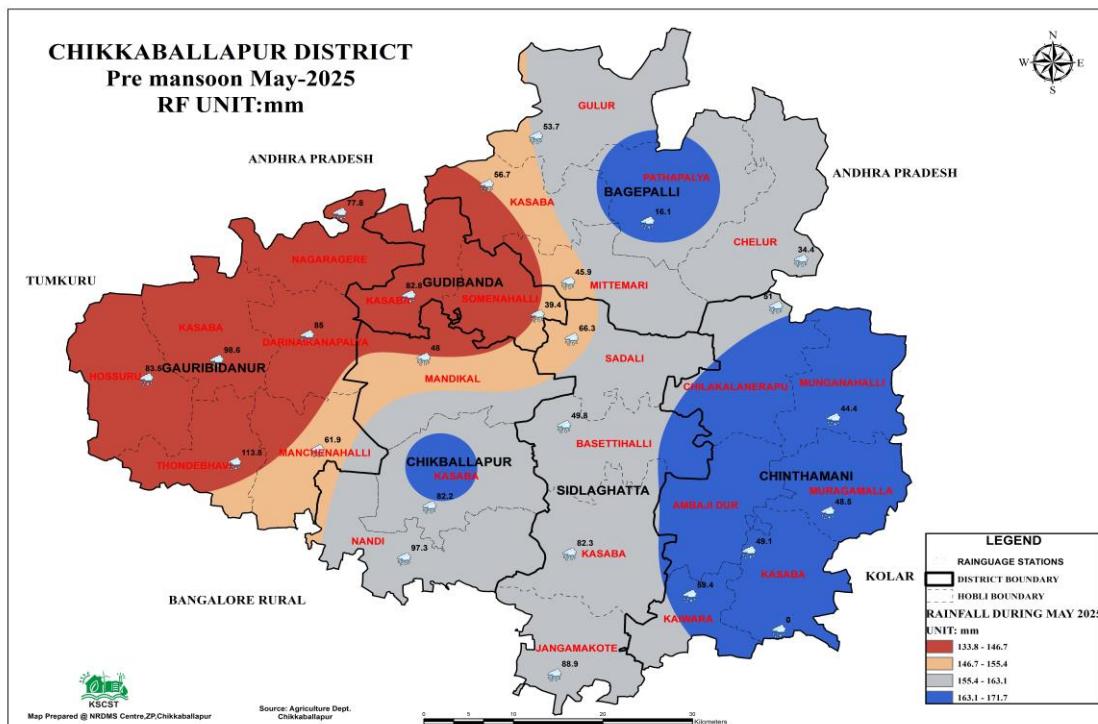

Statistics Requirement:

- 1) Need for monthly rainfall data from rain gauge stations.

Map Uses:

1. The monthly rainfall map of the GIS map will help to identify the areas where there is a shortage of rainfall and the groundwater level situation.
2. With the help of the maps, it will be helpful to study where the rainfall is high in the district and to carry out the works taken under the NREGA scheme.
3. And in case of low rainfall, works such as check dams, lake revitalization, nalabund etc. will be implemented to increase the quality of water.

- Map provided by Jpg and Pdf format.

Uses of GIS for Education Department, Zilla Panchayath

Objectives: A surplus regarding school rooms typically refers to unused or underutilized classrooms or facilities within a school. This situation can happen for several reasons, such as:

Declining Student Enrolment fewer students means fewer rooms are needed for teaching.

Consolidation of Classes Larger class sizes or multi-grade classrooms can reduce the number of rooms used.

Changes in Curriculum or Teaching Style more online learning or flexible learning spaces might reduce traditional classroom usage.

New Infrastructure or Renovation Older rooms may become surplus after new buildings are constructed.

Statistics Requirement: An order was issued to prepare a map of Surplus Schools Locations of the Public Education Department of Chikkaballapur District. Accordingly, the purpose is to collect data from the Education Department and prepare a map of Locations of Surplus Schools.

Map Uses:

Schools can map surplus textbooks, stationery, lab equipment, or furniture.

- Helps administrators track which classrooms/departments have extra and where they can be redistributed instead of buying new.

2. Food Surplus Management

- In cafeterias, surplus maps can show which days or areas generate excess food.
- Helps plan menus, reduce waste, and even direct surplus food toward student welfare programs or community donations.

3. Library & Learning Materials

- Mapping surplus copies of books, journals, or digital licenses across departments.
- Facilitates sharing instead of unnecessary purchases.

4. Budget Planning

- A surplus map of funding and grants (unused budgets from one program vs. shortages in another).
- Helps reallocate money more efficiently.

5. Student Support Programs

- Mapping surplus time, skills, or volunteer hours.
 - Example: Some teachers have extra periods or clubs that can be reallocated to tutoring.
 - Students with extra learning resources can share with peers.

6. Facilities & Space Management

- Mapping surplus classroom or lab space during certain periods.
- Helps optimize scheduling, after-school programs, or even community use.

7. Sustainability Education

- Students can create “surplus maps” as a project to track excess resources (energy, food, water).
 - Encourages awareness about waste and sustainability.
- Map provided by Jpg and Pdf format.

Uses of GIS for Health and Family Welfare Department, Zilla Panchayath

Objectives: This anaemia maps Shows areas or regions with high anaemia prevalence (e.g., rural vs. urban, country-wide surveys). Helps governments and NGOs target nutrition programs, iron supplementation, or deworming campaigns. It identifies high-risk groups (children, pregnant women, elderly). Tracks causes of anaemia (iron deficiency, vitamin deficiency, genetic).

Statistics Requirement: Required PHC wise anemia cases affected data collection.

Map Uses: Easy-to-understand maps help communities see the impact of anemia and motivate participation in health/nutrition programs.

- Map provided by Jpg and Pdf format.

Uses of GIS for Health and Family Welfare Department, Zilla Panchayath

Objective:

- To assess existing PHC coverage in relation to population size and distribution.
- To identify gaps in healthcare delivery where population density is high but PHCs are inadequate or absent.
- To propose locations for new PHCs based on scientific mapping and population data.

- To serve as a planning tool for government, NGOs, and health administrators in strengthening the public health system.

Use of map:

• Health Service Planning

- Shows how population is spread across existing PHCs (Primary Health Centres).
- Identifies underserved areas or population clusters without easy access to healthcare.

Resource Allocation

- Helps authorities decide where to send doctors, nurses, medicines, and equipment.
- Ensures optimal use of limited resources.

Accessibility & Coverage Analysis

- Maps highlight areas beyond the recommended service radius of PHCs.
- Useful for reducing travel time and improving patient access.

Equity in Healthcare

- Ensures rural and remote populations are not left behind.
- Helps in reaching marginalized groups by visualizing population distribution.

Policy & Decision Support

- Serves as evidence for proposals to establish new PHCs.
- Useful in government planning, budget justification, and policy-making.

Monitoring & Evaluation

- Before-and-after comparison once new PHCs are established.
- Helps track reduction in patient load at overcrowded PHCs.

- **Map provided by Jpg and Pdf format.**

Uses of GIS for Tourism Department, Zilla Panchayath

Objective: As suggested by the Honorable Director, Tourism Department, Bangalore, in order to develop Chikkaballapura district as a priority tourist destination, some famous places in the district were identified and 20 km buffer zone maps were prepared by obtaining the latitude and longitude information of their GPS points. From this, the main goal of the government is to identify the places around 20 km of the selected tourist destination as priority tourist destinations and develop those places.

These maps will be useful to know how the 20 km area around the selected tourist destinations can be developed. This defines the spatial limits of an area considered relevant for tourism-related analysis, planning, or promotion.

Map uses:

Tourism Planning – Identifies the catchment area around a destination to plan supporting infrastructure (hotels, transport, facilities).

Resource Mapping – Helps to map natural, cultural, or heritage resources located within a 20 km influence zone of a major attraction.

Carrying Capacity Analysis – Determines how many tourists can be accommodated in the demarcated area.

Sustainable Tourism – Monitors sensitive ecosystems or heritage sites within the buffer for conservation planning.

Connectivity Assessment – Evaluates road, rail, or air access to the destination within the buffer zone.

Destination Clustering – Groups nearby tourist attractions (within 20 km of each other) to develop circuits/packages.

Policy & Zoning – Provides a scientific basis for declaring "tourism zones" where investments, incentives, and development can be focused.

- **Map provided by Jpg and Pdf format.**

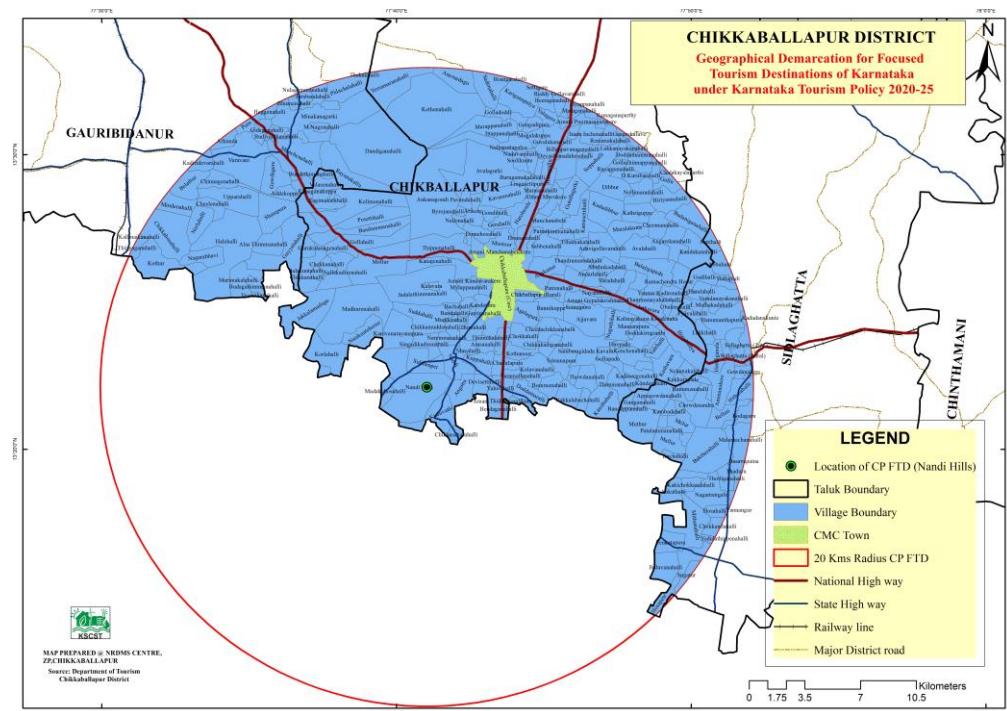

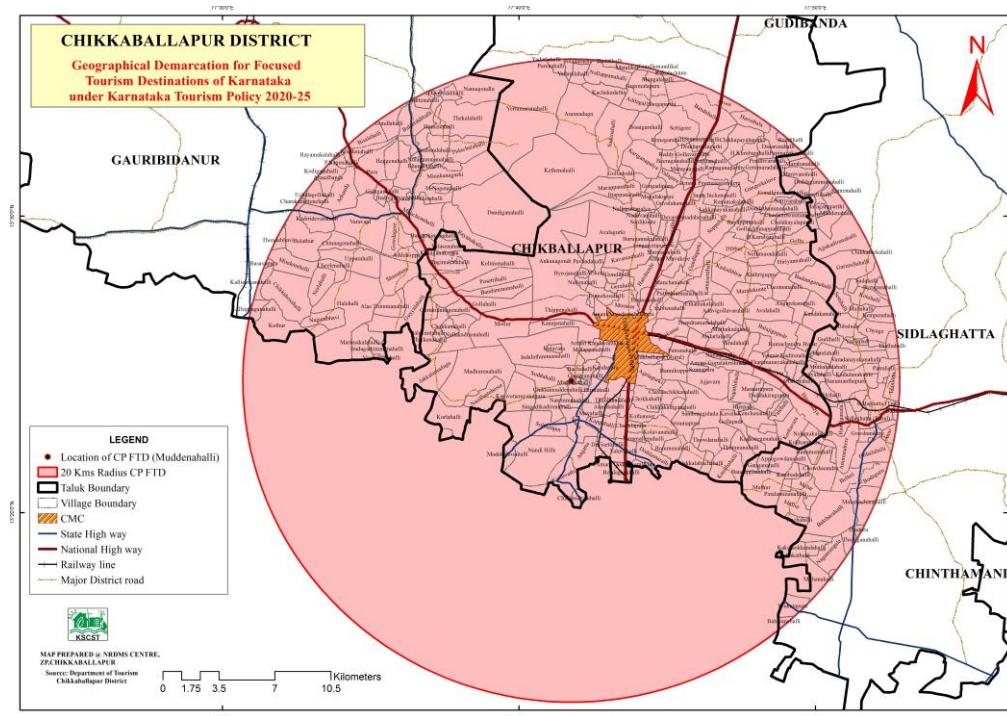

Table: 10

SlNo	Tourist_Destination	Latitude	Longitude
1	Gowribidanur	13.60887	77.51975
2	Chikkaballapur	13.43791	77.73219
3	Gowribidanur	13.60887	77.51975
4	Muddenahalli	13.40754	77.69609
5	Nandi Hills	13.36854	77.68372
6	Chikkaballapur	13.43791	77.73219

7. Training Programmes Attended:

- Attended 1 day training program conducted by MGNREGA & KSRSAC on 09/05/2025 at KSRSAC, Bengaluru regarding KGIS Portal for Road Side Plantation.
- 2 Days GIS orientation Training conducted for Village Administrative Officers (VAO) on 13.06.2025 and 30.06.2025
- Attended “Yukthadhara training” Rural Development & Panchayat Raj Dept through Zoom meeting on 18/08/2025

8. Training Imparted to Line Departments:

Provided training to Forest department staff regarding KGIS Portal for Road Side Plantation on 22.05.2025

9. Science Outreach Activities:

No Science Outreach Activities were conducted during this period.

10. Conclusion:

- Summary of Activities under Take.**

District NRDMS Bangalore rural maintaining various database and providing maps to all line departments. NRDMS is supporting mainly DC office, Election branch, social forest, Disaster management department and all line departments in mapping work and data base creation. Many types of data are used for more than one purpose by more and more one user.

- Commitment to Improve NRDMS Activities.**

- Large Diversity of Spatial Data

- Many types of data are used for more than one purpose by more and more one user.
- Utility of data set may be greatly enhanced by merging or linking it with other data sets.
- Reliability/ consistency can be enhanced by correlating different parameters.
- Many organizations are involved in data collection and updating.
- Need for standardization/ compatibility of procedures of data collection and adaptation.
- Need to improve the utilization of data for decision making.

11. Annexure:

List of Tables:

- 1) Administrative details of Chikkaballapur district.
- 2) General information of Chikkaballapur district.
- 3) Government and Private Bore well 500mtr locations list
- 4) List of Observation Bore well locations and water level depth
- 5) Monthly rainfall list
- 6) Surplus rooms of schools
- 7) Pregnant women HB level<11 having anemia cases list
- 8) Population wise proposed PHC's and number of PHC existing population
- 9) Tourism destination locations

List of Maps:

- 1) Location map of Chikkaballapur District
- 2) 500meter Buffer zone Pvt & Govt. Bore well location map
- 3) Seasonal water level fluctuation map
- 4) From Jan to July 2025 Ground water seasonal water level fluctuation map with OB wells
- 5) Prioritization of villages for providing per capita drinking water supply map (LPCD map)
- 6) Locations of schools having Surplus rooms map of Chikkaballapur district
- 7) Pregnant women (PW) having HB<11 (anemia) cases affected map

- 8) PHC wise Population distribution & Proposed new PHCs
- 9) Geographical Demarcation for Focused Tourism Destinations map of Karnataka under Karnataka Tourism Policy 2025.
